## PERSONAL INFORMATION

|                          |                                                                 |                           |                                                             |
|--------------------------|-----------------------------------------------------------------|---------------------------|-------------------------------------------------------------|
| <b>Name:</b>             | Hyeonbeen Lee                                                   | <b>Date of birth:</b>     | July 4th, 1996                                              |
| <b>Nationality:</b>      | Republic of Korea (South)                                       | <b>Address:</b>           | 116, Saimdang-ro 17gil, Seoul, South Korea                  |
| <b>Military service:</b> | Honorably discharged, Marine Corps Seageant (May 2017~Feb 2019) | <b>Research interest:</b> | Robot learning, Reinforcement learning, Sequential decision |

## EDUCATION

|                                                                                                                             |                                     |
|-----------------------------------------------------------------------------------------------------------------------------|-------------------------------------|
| <b>Banpo High School</b> , Specialized Science Track                                                                        | Mar 2012 — Feb 2015                 |
| <b>Kyung Hee University</b> , Dept. of Mechanical Engineering                                                               | Mar 2015 — Feb 2022                 |
| Bachelor's Degree (Supervisor: Shin-kyu Jeong, Jin-gyun Kim)                                                                | GPA: 3.87/4.5, GPA(Major): 3.84/4.5 |
| Thesis: <i>Data-driven aerodynamic coefficient prediction using deep neural network and PARSEC airfoil parameterization</i> |                                     |
| <b>Kyung Hee University</b> , Dept. of Mechanical Engineering                                                               | Mar 2022 — Feb 2024                 |
| Master's Degree (Supervisor: Jin-gyun Kim)                                                                                  | GPA: 4.33/4.5                       |
| Thesis: <i>Composite neural network with differential propagation for modeling impulsive nonlinear dynamic systems</i>      |                                     |

## SKILLS

- **Programming:** Python, Docker, Linux, Git, L<sup>A</sup>T<sub>E</sub>X, MATLAB, C#, C++, ROS
- **ML and data analysis:** PyTorch, TensorBoard, Pandas, OpenCV, Torchvision
- *Expertised at handling sequential data and models*
- **English:** Speaks in native level
- **Japanese:** Speaks in intermediate level

Experience Section

## PUBLICATIONS

1. S. Han, G.E. Jeong, **H. Lee**, W.S. Choi, J.G. Kim, “Multi-body dynamics model for spent nuclear fuel transportation system under normal transport test conditions”, *Nuclear Engineering and Technology* (IF=2.817), accepted.
2. **H. Lee**, S. Han, H.S. Choi, J.G. Kim. “cNN-DP: Composite neural network with differential propagation for impulsive nonlinear dynamics”, *Journal of Computational Physics* (IF=4.645), submitted.
3. **H. Lee**, J. Han, T. Yeo, J.G. Kim. “Multi-horizon force components forecasting of ocean robot using interpretable Transformer and experimental measurements”, in preparation.

## CONFERENCES

## PROJECTS

---

|                   |                                                                                                                                                                                                                                                                                                                                                            |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2021.09 — 2022.10 | Development of ground · sea transportation test simulation model using multibody dynamics and DNN-based metamodel, Korea Atomic Energy Research Institute (KAERI).                                                                                                                                                                                         |
| 2021.09 — Present | Metamodel generation and evolution procedures for flexible multibody dynamics, FunctionBay Inc.                                                                                                                                                                                                                                                            |
| 2021.11 — Present | cNN-DP: Composite neural network with differential propagation for impulsive nonlinear dynamics, Modeling & Simulation Lab. ( <a href="https://github.com/hyeonbeenlee/cNN-DP">github.com/hyeonbeenlee/cNN-DP</a> )                                                                                                                                        |
| 2022.03 — Present | Deep-learning based reaction force and torque prediction model development for underwater ground cutting robot using experimental measurements and dynamic simulation data, Korea Research Institute of Ships and Ocean Engineering (KRISO). ( <a href="https://github.com/hyeonbeenlee/TimeSeriesSeq2Seq">github.com/hyeonbeenlee/TimeSeriesSeq2Seq</a> ) |
| 2022.12 — 2023.06 | RecurDyn Automation using Python, Modeling & Simulation Lab. ( <a href="https://github.com/hyeonbeenlee/RecurDynPython">github.com/hyeonbeenlee/RecurDynPython</a> )                                                                                                                                                                                       |
| 2023.03 — 2023.06 | Segment Anyone: Fine-tuned Segment-Anything-Model (SAM) for human-collaborative robots, Kyung Hee University Dept. of Artificial Intelligence. ( <a href="https://github.com/hyeonbeenlee/segment-anything-fine-tuning">github.com/hyeonbeenlee/segment-anything-fine-tuning</a> )                                                                         |

## AWARDS AND CERTIFICATES

---

- **TOEIC:** 925/990 No.605083, Nov 25 2018
- **New TEPS:** 513/600 No.0111736, May 13 2023
- **Academic Excellence Scholarship (Full tuition)** Kyung Hee University, Mar 01 2021
- **Exellence Paper Award** Korean Society of Mechanical Engineers, No.2023-083, Aug 25 2023
